In response to applicant's pre-amendment dated May 31, 2001. The following action is taken:

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Ogawa (5042022).

The independent claim merely read on controlling the laser source based on a clock (servo) signal read from the disk. The reference shows an optical disk recording, erasing and reading apparatus having clock signal generating pits 2a in order to control the laser source as cited in column 7 lines 1-25 and illustrated in figs 7 and 9.

With respect to the limitation of claim 2 see figs 7 and 9 showing the intermittent operation of the loser pulse.

Claims 3-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

None of the cited prior art shows the intermittent control operation based on a mute or focus lock signal as claimed.

Claim 7 is allowed.

Art Unit: 2655

None of the cited prior art shows the use of a frequency multiplier, pulse width adjusting circuit and a mode switching circuit operating as claimed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. 6205098.
